DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, drawn to a method treating a subject having an ischemic event comprising administering EPO, classified in class 514, subclass 2.
- II. Claims 25-36, drawn to a method for promoting functional recovery in a subject after an ischemic event comprising administering EPO, classified in class 514, subclass 2.
- III. Claims 37-48, drawn to a method for reducing infarct size in a subject comprising administering EPO, classified in class 514, subclass 2.
- IV. Claims 49-58, drawn to a method for inhibiting apoptosis or inflammation in the CNS in subject comprising administering EPO, classified in class 512, subclass 2.

Inventions I-IV are unrelated methods. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). The Groups are drawn to distinct methods; methods for treating ischemia, reducing infarction, apoptosis, inflammation and methods for promoting functional recovery. The inventions have diverse modes of operation and different effects. Moreover, the methodology and materials necessary for discerning the efficacy of the instant methods differ

Application/Control Number:

10/810,755

Art Unit: 1647

significantly. For instance, a method drawn to inhibiting apoptosis or inflammation in the CNS would require methodologies and materials such as thymidine incorporation to discern cell death. A method for reducing infarct size would require methodologies and materials such as imaging of brain sections. Furthermore, the distinct methods would require separate and distinct searches. A search to identify documents relevant to the patentability of the claimed methods would not necessarily employ the same or similar search terms and techniques. Therefore, a search and examination of all methods in one patent application would result in an undue burden, since the searches for the methods are not co-extensive, the classification is different, and/or the subject matter is divergent.

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and/or the search required for each group is not required for the other groups because each group requires a different non-patent literature search due to each group comprising different products and/or method steps and/or is recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

Application/Control Number:

10/810,755 Art Unit: 1647

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Regina M. DeBerry whose telephone number is (571) 272-0882. The examiner can normally be reached on 9:00 a.m.-6:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brenda G. Brumback can be reached on (571) 272-0961. The fax phone
